

## GROWING-ALONG BITE PROTECTION

BIOBASED

GROWS WITH THE PLANT

EFFICIENT

DEGRADABLE

**100% BIO-BASED,  
GROWS WITH THE PLANT,  
BIODEGRADABLE AND EFFECTIVE  
AGAINST BROWSING DAMAGE**

**CroProtect®** is a specially developed bite protection that protects the terminal shoot – the most important growth point of a tree – from browsing damage.

It can be placed directly to the tip of the shoot and provides reliable protection until the plant has reached a height where it is no longer at risk.

The browsing protection is created to be placed on the terminal shoot and grows with the tree. The flexible but stable material adapts to the growth without causing pressure marks or deformations. At the same time, the open shape ensures that light, air and rainwater can reach the shoot tip unhindered – a crucial factor for healthy growth.

CroProtect® is made of a TÜV-certified biomaterial (OK biodegradable Soil) that is completely biodegradable under long-term contact with the soil. This means that the product is not only a durable, but also an environmentally friendly solution.

The combination of sophisticated design, sustainable material and practice-oriented application, CroProtect® is an innovation that convinces forest owners, forestry businesses and Christmas tree plantations equally.

### Brief Explanation:

CroProtect® is an innovative browsing protection especially for conifers – developed from 100% bio-based, TÜV-certified biodegradable material. The smart, growing-along shape reliably protects the terminal shoot from browsing by wildlife without hindering growth.

Irrespective whether in forests, reforestation projects or Christmas tree plantations, CroProtect® combines a maximum protection with an overall environmental sustainability.

**This is how it looks like, when wildlife damages the trees. And CroProtect® protects right here.**

## CroProtect® is made of bio-based material and is biodegradable.

CroProtect® was developed with the goal to protect young trees in the forest not just effectively but also in an eco-friendly manner on top. The product consists of a fully bio-based material that has been designed for outdoor application in particular. The material used is certified according to ISO 17556 / EN 13432 and holds the 'OK biodegradable Soil' seal approved by the TÜV Austria. This guarantees that CroProtect® biodegrades completely under permanent contact with the soil – without leaving any residues or microplastics.
